## **ABSTRACT**

A vehicle-mounted man-machine interface device comprises display means for displaying a screen, press detecting 5 position means for detecting the press the control for position on screen, and means displaying an operating screen on which operating figures are arranged on the display means acquiring the operation content specified by the press 10 on the operating screen from the arrangement positions the operating figures, the operation on operating figure, and the output of the press position detecting means. The device further comprises traveling detecting means for detecting whether or not 15 having vehicle the device is traveling detecting the traveling speed of the vehicle. The control manes sets or alters one or both of the number of operating figures simultaneously displayed on the operating screen and their sizes according to the 20 output from the traveling detecting means. With this, a man-machine interface technique for easily and reliably performing operation can be provided.
